## Compound measures

A car travels 100 km in 2 hrs . What is its average speed in $\mathrm{km} / \mathrm{h}$ ? In $\mathrm{m} / \mathrm{s}$ ?
$50 \mathrm{~km} / \mathrm{h}=13.9 \mathrm{~m} / \mathrm{s}$
Another car travels 100 km in 2 hrs 30 minutes. What is its average speed in $\mathrm{km} / \mathrm{h}$ ? In $\mathrm{m} / \mathrm{s}$ ?
$40 \mathrm{~km} / \mathrm{h}=11.1 \mathrm{~m} / \mathrm{s}$
An object has density $45 \mathrm{~kg} / \mathrm{m}^{3}$ and a mass of 135 kg . What is the object's volume?
$3 \mathrm{~m}^{3}$
A jet flies for 3 hrs 20 minutes at an average speed of 600 mph . How far does it fly?

2000 miles
Lewis Hamilton does a lap of Monaco in 1 minute 20 seconds. If one lap is 3.3 km long, what was his average speed in $\mathrm{km} / \mathrm{min}$ ? In $\mathrm{km} / \mathrm{h}$ ?
$2.475 \mathrm{~km} / \mathrm{min}=148.5 \mathrm{~km} / \mathrm{h}$
A block of concrete is 3 cm wide, 4 cm high and 5 cm long. It has a mass of 15 kg . What is its density in $\mathrm{kg} / \mathrm{cm}^{3}$ ? In $\mathrm{kg} / \mathrm{m}^{3}$ ?

$$
0.25 \mathrm{~kg} / \mathrm{cm}^{3}=250000 \mathrm{~kg} / \mathrm{m}^{3}
$$

A person drives 15 km to the shops at an average speed of $30 \mathrm{~km} / \mathrm{h}$, then drives back at an average speed of $60 \mathrm{~km} / \mathrm{h}$. What is their average speed over the two journeys?
(Hint: The answer is not $45 \mathrm{~km} / \mathrm{h}!!$ )
40 km/h
(It takes them 30 minutes to get to the shop, then 15 minutes to return. They have driven 30 km in 45 minutes so their average speed is $30 \div 0.75=40 \mathrm{~km} / \mathrm{h}$ ).
