## Constructing Pie Charts

Bill makes a list of all the cars in a car park:
Red, silver, black, black, black, red, black, black, red, black

Enter these into the tally chart below.

| Car colour | Tally |  |
| :--- | :--- | :--- |
| Silver |  |  |
| Red |  |  |
| Black |  |  |

There are $\qquad$ cars in total.
So we want to divide our pie chart into $\qquad$ equal parts.
There are $\qquad$ degrees in a circle.

So each car is worth $360^{\circ} \div 10=$ $\qquad$ ${ }^{\circ}$

Silver slice of pie $=1 \times$ $\qquad$ ${ }^{\circ}=$ $\qquad$ ${ }^{\circ}$

Red slice of pie $=3 \times$ $\qquad$ ${ }^{\circ}=$ $\qquad$
Black slice of pie $=6 \times$ $\qquad$ ${ }^{\circ}=$ $\qquad$ -

Starting at the vertical line, draw these slices onto the pie chart.

12 people are asked for their favourite crisp flavour. Here are the results:
5 ready salted
1 prawn cocktail
4 salt and vinegar
2 cheese and onion

There are $\qquad$ people in total
So we want to divide our pie chart into $\qquad$ equal parts
There are $\qquad$ degrees in a circle

So each person is worth $360^{\circ} \div 12=$ $\qquad$ ${ }^{\circ}$

Ready salted slice of pie $=5 \times$ $\qquad$ ${ }^{\circ}=$ $\qquad$ ${ }^{\circ}$

Prawn cocktail slice of pie $=1 \times$ $\qquad$ ${ }^{\circ}=$ $\qquad$ ${ }^{\circ}$

Salt and vinegar slice of pie $=4 \times$ $\qquad$ ${ }^{\circ}=$ $\qquad$ ${ }^{\circ}$

Cheese and onion slice of pie $=2 \times$ $\qquad$ ${ }^{\circ}=$ $\qquad$ $\circ$

Starting at the vertical line, draw these slices onto the pie chart.
